Dr. Johnson,

If you are looking for information on Mosaic's phosphate mines I would go to <http://www.mosaicco.com/>. I do not have a contact there as they are our competition.

As for your question if our Fluoride is safe to drink. Dumont's HFS 23000 Fluoride is certified by Underwriting Laboratories (UL) to be NSF/ANSI 60 and AWWA approved for drinking water. That means it is safe to put in drinking water and if it is safe to put in drinking water then it would be safe to drink. Dumont also has other products that have this same certification from UL that are used all across the State of Florida. These other products are Sodium Hydroxide 25% (SH 2500) and (50% SH 5000), all of our ClearFlow Corrosion Inhibitor products and Ammonium Sulfate 40% (AS4000). I have attached our list to this email.

I hope that this information is helpful to you.

If you have any questions please let me know.

Thanks,

**Chris Fleming | Technical Support Administrator**
